

# Strobes

By NookSchoenfeld

The days of xenon bulbs in strobes is just about over. Diversitronics, the one-time leader in the market, has stopped making fixtures, but they still sell bulbs. Solaris Strobe still offers one, and you may still be able to find a Lightning Strike in a Hollywood shop. The GAM Star Strobe (marketed by Rosco) is now a double-ended xenon flicker, but everyone else is now LED. The Martin Atomic got itself an Aura. The Ayrton MagicBurst is a strobe machine unlike any other. GLP may just be the leader these days with lots of functions — and a strobe with a tilt function. And all these babies are *bright*. Happy shopping, and be glad you're just looking at photos and not actual units fired up at 100 percent.
