KVANT Burstberry

KVANT Burstberry is the new self-contained laser/lighting fixture, designed to be used in multi-head configurations and controlled mainly from a lighting desk via DMX or ArtNet. The individual units can be joined together from 12 different directions so it's possible to create pretty much any shape required. As well as being fully equipped RGB laser display system, each unit also offers Beam Burst effect and white-LED blinder. All the features together represent a whole new type of the lighting effect that can produce unimaginable visual effects.

Telescopic Mast

The Telescopic Mast lift is comprised of a rigid chain actuator that drives a set of telescopic tubes to the desired height, securely lifting a heavy load. The unit retracts to a low height and is contained within a small footprint. The aluminum telescopic tubes are color-matched to the desired decor. Multiple units are multiplexed to be controlled by a master panel, with safety lockouts for each unit. Low noise levels make the product perfect for in-performance use.
